# OFF HIGHWAY BLIND

## HOOK-IN BLINDS

The OH B hook-in blinds are characterized by their simple design. There are no additional side wise guidings necessary. The grip rod is positioned by one central or two sidewise hook-in pins.

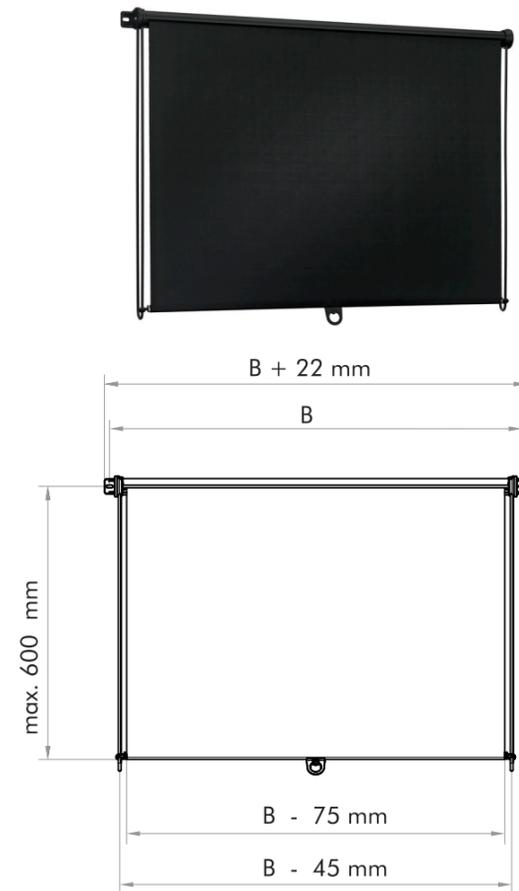

screw-on width (B):  
600 // 700 // 800 // 900 // 1000 // 1100 // 1200 mm

Hook-in pins are included, Fixing material is not included.

## ROCKER BLINDS

The OH B rocker blinds can be adjusted steplessly in both directions. The pretension of the fabric tilts via grip rod the clamp elements which are side wise guided by straight or U-bended rods. By operating, the clamp elements are tilted automatically in such manner that the grip rod can be moved without friction.

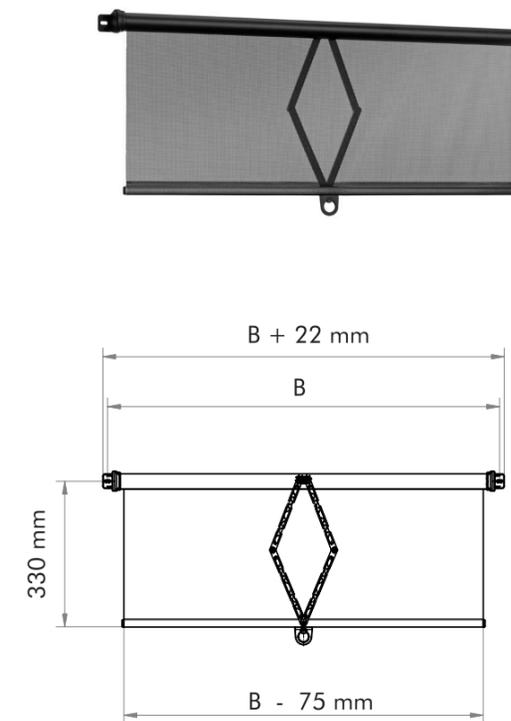

screw-on width (B):  
600 // 700 // 800 // 900 // 1000 // 1100 // 1200 mm

Fixing material is not included.

## SCISSOR BLINDS

The OH B scissor blinds are preferably used wherever there is no possibility of fixing sidewise guidings or they are unwanted. They can be adjusted steplessly in both directions without any additional fastening elements. The guiding of the blinds is carried out by scissors with patented wear-bridging friction elements.

screw-on width (B):  
450 // 700 // 900 mm

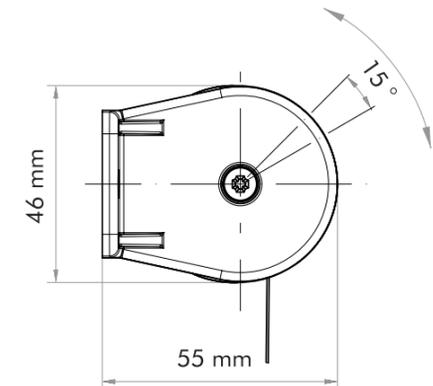

Fixing material is not included.

## RANGE OF APPLICATION

special-purpose vehicles, agricultural machinery, construction machinery, crane cabins, forklift truck cabins, after market, etc.

## INSTALLATION

Each type of OH B blind has two-parts and in 15° steps adjustable side wise end caps. Hereby you can react variably to various installation situations. The end caps are pre-assembled and will be adjusted and fixed during installation.

## TYPES OF FABRIC

- a. transparent
- b. black-out
